14 DAY FREE TRIAL!

The screenshot displays the XRebel performance monitoring interface. The browser address bar shows 'localhost:8080/owners?lastName='. The main content area shows a call stack for an HTTP GET request to /owners. The stack includes various Spring and JPA components, with the most significant time spent on a JPA query: 'SELECT DISTINCT owner FROM Owner owner left join fetch owner.pets WHERE ow...'. Below the query, the SQL text is visible: 'select= visits0_.pet_id as pet_id4_6_0,= visits0_.id as id1_6_0,= visits0_.id as id1_6_1,= visits0_.visit_date as visit_da2_6_1,= visits0_.description as descript3_6_1,= visits0_.pet_id as pet_id4_6_1, from= visits visits0,= where visits0_.pet_id = NP'. The interface also shows a search bar and a 'Show hidden' toggle.
